## How to edit posts

There are few instructions you need to follow with this template

Use images not less than 560px, don't worry for the larger one it will resize automatically but when you place a smaller image this will expand to optimized image size and it will look really bad.

So use image larger than 560px.

And never use any text editor for posting like word or PDF because they have a special formatting and when you paste these codes in the blogger editor, the parent formatting remains same as it is. And blogger don't understand about that formatting. This will cause your image look bad or something you have not written will show as summary on homepage.

Please upload image with default blogger image uploading tools.

## How to edit Slider
